(54) REMOTE MONITOR SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a remote monitor system capable of reducing the labor of a user (monitor) on a system operation, and guaranteeing a sense of security or convenience to the user.

SOLUTION: In this system in which a unit at a place to be monitored is connected through a relay station to a unit at a remote place so that the state of the place to be monitored can be monitored from the remote place, the unit at the place to be monitored images the place to be monitored, and converts the imaged picture data into transmission data, and transmits the transmission data to a public telephone line network, and the relay station receives the transmission data through the public telephone line network, and converts the transmission data, and prepares a Web page including the converted data, and uploads it in a Web server on a packet communication network, and the unit at the remote place performs access through the packet communication network to the Web page.
